

PROCUREMENT

Ramboll offers scalable resources and flexible conditions for procurement

At Ramboll we offer our clients to handle all aspects of the supply chain in connection with engineering projects, EPC projects or as a stand-alone service. The client's needs are our main focus, and we are equipped to handle both larger as well as smaller projects.

In-house procurement

Our in-house procurement specialists are responsible for the administration of contracts from the request for quotation to contract close-out. That includes assisting with tenders and bid evaluation, supplier evaluation and selection, as well as carrying out audits. Moreover, the team handles follow-up/expediting/quay check, logistics, receipt of goods, payment of invoices and reporting. In this strategic sourcing solution, Ramboll offers to provide all personnel, materials, equipment, consumables and facilities.

Ensuring technical integrity and on time delivery

At Ramboll, engineers and procurement teams work closely together to become familiar with the specific project.

The procurement team has available and skilled resources and can react immediately when receiving technical data for tendering from the engineers. They engage in the project by proactively providing feedback to the engineering team if e.g. an unrealistic time frame or a prolonged delivery time on a custom-made item jeopardise the overall time schedule of the project. The close co-operation positively affects the project as the communication paths are shortened.

Oil and gas specialists

Our in-depth knowledge and experience with procurement for oil and gas projects enables Ramboll to assume a critical approach and

point out oversights or logistical problems before they reach a critical stage. The procurement team can also assist the client with a logistics plan and ensure transportation of the goods in a cost-effective manner.

Ramboll's procurement procedure

Ramboll's procurement set-up is flexible, allowing us to cater for diverse client needs and wishes. We typically carry out procurement on behalf of the client with the client carrying all risks for equipment delivery, insurance, equipment warranty and transport.

We procure items according to client's requirements and procedures. If the client does not have specific requirements, Ramboll's procurement procedure will be used. Purchasing activities will be organised so that the individual employee has no other incentive than providing the client with the best possible combination of quality, price and delivery time.

Thorough planning

At project kick-off, a milestone plan is established based on budget quotes, delivery times etc. The plan will be updated accordingly when bids are received with delivery schedules. The plan can include preparations, purchasing, spares, expediting, supplier documentation, logistics, reporting and handover.

International supplier network and bulk buying benefits

Ramboll holds offices in a number of oil and gas hotspots in the US,

Middle East, India, Russia, Denmark, Norway and in the UK. Being situated in geographic energy clusters where a great number of other companies with related competencies are situated, increases our competitive strength and keeps us in touch with key suppliers, up to date on pricing and informed about technical trends in the industry. Based on that, we can provide our clients with procurement services, which combine quality and low costs.

Ramboll will ensure that equipment and services purchased under a given contract are purchased at competitive rates. Moreover, we are able to take advantage of the synergies that arise when purchasing for multiple clients increases the total procurement volume making us able to obtain bulk buying benefits.

About Ramboll

Ramboll Oil & Gas provides highly specialised engineering consultancy services to the worldwide oil and gas industry. We employ 1,000 dedicated oil and gas specialists and have four decades of experience within oil and gas. Ramboll Oil & Gas is part of the Ramboll Group, a leading European consultancy founded in 1945 with a broad foundation in all engineering and design disciplines. The Ramboll Group counts some 11,000 employees in more than 20 countries.
